Ferromagnetic Resonance-Enhanced Electrically Small Antennas

arrays and periodic structures

low scattering element-based aperture-shared array for multiband base stations

3-d printed metallic dual-polarized vivaldi arrays on square and triangular lattices

j. s. yang, y. yang, and y. x. yang

j. pfeiffer, j. massman, and t. steffen

millimeter-wave mta array fed by high-order modes with a low cross-polarization level and relaxed fabrication tolerance

j. chen, w. yu, w. x. tang, l. wang, q. cheng, and t. j. cai

redundancy elimination of the classic low-periodic dipole array antenna by resonance point optimization for a miniaturized structure

j. pu and b. zhang

a low-profile broadband dual-polarized base station antenna array with well-suppressed cross-polarization

b. wang, c. liao, and c.-h. du

a 4×4 dual-polarized dual-beam series-fed metasurface antenna array with stable beam angle

l. gu, w. yang, q. xue, and w. che

leaks-wave antenna arrays for flexible dual-beam switching

x. li, l. zhang, z. li, l. li, m. chen, z. zhang, and y. geng

dual-band circularly polarized fully reconfigurable reflectarray antenna for satellite applications in the ku-band

b. baladi, m. y. xu, n. faria, j. nicholls, and s. v. hum

design of millimeter-wave circularly polarized endfire antenna and multibeam antenna array for wireless applications

k. wu, y. yao, x. cheng, j. yu, and x. chen

landstorfer printed low-periodic dipole array antenna with enhanced stable high gain for 5g communication

y. chen, s. wang, s. shi, m. jiang, j. ding, j. guo, and g. zhai

unusual dipole divice

concentrically embedded spatially divided oam carrying vortex beams using transmittarray

a. valeaud shahmirzadi, b. badamchi, b. badamchi, and h. subbaraman

equivalent orthogonal beam steering for fast determination of reactions between two phased arrays of antennas with analog beamforming networks for maximum wireless power transfer

h.-t. chou

integrated low-profile low radar cross section circularly polarized dipole antenna array

c. jin, b. zhang, l. yin, q. liu, l. kong, and l. li

electromagnetics

a novel miniaturized multiband strong-coupled-pss structure insensitive to almost all angles and all polarizations

f.-w. li, y.-d. fan, y.-j. gu, s.-y. zhou, p.-f. qin, d. li, w. e. i. shu, and e.-p. li

analytic solution of surface–volume–surface electric field integral equation on dielectric sphere and analysis of its spectral properties

y. o. o. y. gurewitz

low-profile planar dielectric polarizer using high-dielectric-constant material and anisotropic antireflection layers

c. ding and k.-m. luk

controlling graphene sheet resistance for broadband printable and flexible artificial magnetic conductor-based microwave radar

y. yang, k. pan, t. leng, h. h. oaslimani, k. s. novoisev, and z. hu

efficient computation of spatially discrete travelwave-wave modulated structures

c. searbourough, z. wu, and a. gebic

fail envelop characteristic mode solution to lossless composite metallic–dielectric problems

s. huang, c.-f. wang, j. pan, d. yang, and m.-c. tang

numerical methods

a novel framework of singularity cancellation transformations for strongly near-singular integrals

m.-d. zhu, t. k. sarkan, y. zhang, and m. sanitizer-palma

em analysis of geometrical uncertainty for metallic/dielectric bodies of revolution targets

z. he, y.-s. li, x. huang, c.-f. yang, and r.-s. chen

a flexible fem-eme-dm for em scattering by multiscale anisotropic objects

x. yang, m. jiang, l. shen, p.-h. jia, z. rong, y. chen, l. lei, and j. hu

on the deviation of mas fields in the far-field region of elementary sources close to infinite boundaries

c. mylidis and p. j. papakanellos

fast convergent quadrature method for evaluating the rwg- and swg-related convolutional integrals

r. r. chang, z. wang, and q. xie

adaptive multilevel nonuniform grid algorithm for the accelerated analysis of composite metallic–dielectric radomes

y. hollander and a. boag

adm: an extended adaptive integral method for the fast electromagnetic modeling of complex structures

s. sharma and p. trivisio

wave propagation and scattering

a ray-tracing model for millimeter-wave radio propagation in dense-scatter outdoor environments

j. c. da silva and e. costa

analytical improvement on the electromagnetic scattering from deformed spherical conducting objects

b. ates, a. kustepel, and z. cetin

rain effect on 4g lte in-car electromagnetic propagation analyzed through mdt radio data measurement reported by mobile phones

y. a. micheli, g. marnitore, a. vermeili, a. secaloni, m. syhate, and p. creola

a simple procedure to design virtual experiments for microwave inverse scattering

m. t. benavqua, r. palmeri, t. ieremia, and l. crocco

quantitative electromagnetic inversion of irregular scatterers based on a threefold hybrid method

y. chen, l.-y. xiao, j. zhou, f. han, and q. h. liu

a new lowpass mode propagator for the earth–ionosphere waveguide

f. gazda and r. a. marshall

a spectral approach to nondestructive testing via electromagnetic waves

y. zuo, l. guo, w. liu, and s. liu

an bistatic scattering evaluation method of the target in airflow based on vrt

x. han, h. xu, y. chang, m. lin, and x. wei

on single-wire power line microwave communication using low-loss modes

r. g. olsen

a multistatic channel model composed of line-of-sight and semi-line-of-sight propagation environments for millimeter-wave mobile radio systems

y. karasawa

other topics

the effect of noise on reverberation-chamber measurements of antenna efficiency

a. hubrechen, k. a. remley, r. d. jones, d. f. williams, d. gu, a. b. smolders, and l. a. bronckers

imaging of subwavelength microstructures by time reversal and neural networks, from synthetic to laboratory-controlled data

p. ran, s. chen, m. serbir, and d. lesselier

fully flexible polymer-based microwave devices: materials, fabrication technique, and application to transmission lines

i. cherubini, s.-p. guo, and y. guo
COMMUNICATIONS

Circularly Polarized FP Resonator Antenna With 360° Beam-Steering ........................................... P. Xie, G. Wang, X. Zou, and B. Zong

Array Surface-Wave Launcher for the Efficient Generation of Slanted Beam and Multibeam With Metasurface ........................................................................................................... M. Bodehau and C. Craeye

Wide-Beam Dielectric Resonator Antennas Based on the Fusion of Higher-Order Modes ............................................. M. Bojasek, J. Pan, S. Huang, D. Yang, and Y. Guo

A Compact Metamaterial-Based Antenna for Multibeam Phased Array Applications ............................................. D. Gallardo, D. Monasterio, R. Fínger, F. P. Mera, and L. Bronfinman

Dual Circular Polarizations Generated by Self-Polarizing Fabry–Pérot Cavity Antenna With Loaded Polarizer ......................................................................................................................... Y.-L. Li and K.-M. Luk

Compact Wideband Circularly Polarized Dipole Antenna Using Modified Quadrature Hybrid Couplers ................................. H. Wang and I. Park

Diverse SRRs Loaded Millimeter-Wave SIW Antipodal Linearly Tapered Slot Filtenna With Improved Stopband ........................................................................................................................... M. Hu, Z. Yu, J. Xu, J. Lan, J. Zhou, and W. Hong

Dual Orthogonal Port Stacked Patch Antenna With Vertical Pins for Simultaneous Transmit and Receive Application ................................................. D. Inserna and G. Wen

A Low-Scattering Pivoted Dielectric Rod Waveguide Probe for Near-Field Measurement ............................................... H.-J. Lim, H.-B. Park, and K. C. Huang

Gain Stabilization Method for Wideband Slot-Coupled Microstrip Antenna ........................................................ W. Sun and Y. Li

Differentially Fed Dual-Modes Patch Antenna With Wideband Common-Mode Absorption and Its Array Application ....................................................................................................................... P. Zhou, Y. Liu, H. Zhao, Y. Shi, and X. Yin

X-Band Low-Probability Interceot Marine Radar Antenna Design With Improved Bandwidth and High Isolation .............................................................................................................................. M. Pohlmann and K. Yegun

Low-CRS Antenna Array With Switchable Scattering Patterns Employing Microfluidic Liquid Metal Alloy-Based Metasurface ................................................................................................................. Y. Liu, Z. Liu, Q. Wang, and Y. Jia

Multilayer Minkowski Reflectarray Antenna With Improved Performance ........................................................................ E. Ozturk and B. Saka

Realization of a Beam-Tilted Circularly Polarized Corporate-Fed Waveguide Slot Array in the 60 GHz Band ................................................................................................................................. Z. Huang, S. Matsueda, J. Hirokawa, and M. Ando

Shared-Radiator Design of Dual-Band Coplanar Base Station Antenna Array Using Cavity-Backed Slots ................................................................................................................................. Y. Li and Q.-X. Chu

Cross-Band Mutual Coupling Reduction in Dual-Band Base-Station Antennas With a Novel Grid Frequency Selective Surface .................................................................................................................. Y. Zou, Y. Chen, and S. Yang

Wide-Angle Scanning Phased Array Antennas Using Metasurface Slabs ............................................................................ B. Yi, Y. Xiao, M. Li, Y. Li, H. Sun, and Z. Chen

Wideband and Gain Enhancement SIW Slot Array Antenna Using Sparsification Processing and Composite Metasurface ......................................................................................................................... H. Bai, G.-M. Wang, X.-J. Zou, and T. Wu

Calculation of the Total Radiated Power for 4-D Antenna Arrays With Arbitrary Time Modulated Waveform ................................................................................................................................. Q. Zeng, P. Yang, L. Yin, H. Lin, C. Wu, F. Yang, and S. Yang

Dual-Band Miniaturized Linear-to-Circular Metasurface Polarization Converter With Wideband and Wide-Angle Axial Ratios ................................................................................................................. H. B. Wang, Y. J. Cheng, and Z. N. Chen

On the Use of Absorbing Metasurfaces in Microwave Imaging ................................................................................................. Z. Liu, N. Bajat, and P. Mojsi

An Adaptive DGTD Algorithm Based on Hierarchical Vector Basis Function ........................................................................... Y. Zhou, R. Huang, S. Qiu, R. Chen, G. Yang, and Q. H. Liu
