EDITORIAL
Reflections From the New Editor-in-Chief ......................................................... N. Nikita

PAPERS
Antennas
Development of a Ka-Band Non-Regular Multibeam Coverage Antenna .................. E. Calà, M. Baldelli, A. Catalani, E. Menargues, G. Tos, and P. Angeletti
220 GHz High-Gain Substrate Integrated Antennas With Low Fabrication Cost Based on Higher Order Mode and PCB Technology .................................................. P. Wu, K. Liu, and Z. Yu
Circulatorially Polarized Broadside Beam Radiated From a Large, Low-Profile Metamaterial Antenna .......................................................... H. Nakano, T. Abe, and J. Yamauchi
Metasurface Antennas Design: Full-Wave Feeder Modeling and Far-Field Optimization ................................................................. J. Cavillot, M. Bodehou, and C. Craeye
Wideband High-Gain Omnidirectional Biconical Antenna for Millimeter-Wave Applications ................................................................. Z.-Y. Zhang, K. W. Leung, and K. Lu
Broadband Millimeter-Wave Antenna in Package With L-Probed E-Shaped Patch Covering 57 GHz to 71 GHz ................................................................. T. H. Jang, K. P. Jung, and C. S. Park
Bandwidth and SNR of Small Receiving Antennas: To Match or Not to Match .............................. K. Sarabandi and M. Rao
Low-Cost and Highly Accurate Behavioral Modeling of Antenna Structures by Means of Knowledge-Based Domain-Constrained Deep Learning Surrogates .................... S. Koziel, N. Çalık, P. Mahouti, and M. A. Belen
A TM₁₄ High-Order Mode Leaky Wave Antenna .......................................................... G. P. Carrara, C. L. Zekios, and S. V. Georgakopoulos
A Broadband Low-Profile Circularly Polarized Radial Line Slot Antenna ........................ M. Bertrand, M. Ettorre, G. Valerio, M. Alban, and M. Casaletti
Wideband Absorbing Metasurface for Improving Axial Ratio of a Compact Archimedean Spiral Antenna ................................................................. A. Roy, K. J. Vino, N. Martin, S. Mallégol, and C. Quendo
Phased Array With Pattern Shaping and Scan Loss Reduction for Millimeter Waves ................................................................. R. M. van Schelven, W. H. Syed, G. Carluccio, K. Doris, A. de Graaauw, A. Neto, and D. Cavallo
Broadband Electromagnetic-Transparent Antenna and Its Application to Aperture-Shared Dual-Band Base Station Array ................................................................. R. C. Dai, H. Su, S. J. Yang, J.-H. Ou, and X. Y. Zhang
Single Motor-Controlled Mechanically Reconfigurable Reflectarray .................................................. Z. Cao, Y. Li, Z. Zhang, and M. F. Iskander
Multi-Channel Implantable Cubic Rectenna MIMO System With CP Diversity in Orthogonal Space for Enhanced Wireless Power Transfer in Biotelemetry ............................................. V. Kaim, N. Singh, B. K. Kanaujia, L. Matekovits, K. P. Esselle, and K. Rambabu
Modeling and Analysis of the Active Surface System for the Large Single-Dish Sub-mm Telescope ........................................................................................................ J. Gao, H. Wang, Y. Zuo, J. Yang, X. Chen, M. Zhang, X. Zhang, W. Cheng, J. Liang, and T. Zhang
Low-Profile True-Time-Delay Beamsteerable Leaky-Wave Antenna for Satellite Applications in the K Band
Focal-Plane Arrays With Improved Scan Capabilities
A Survey of Antenna Miniaturization Technology Based on the New Mechanism of Acoustic Excitation
A Study on Electromagnetic Scattering Characteristics of 4-D Antenna Arrays
Cavity-Backed Double H-Slot Antenna With IPMC Flaps for Designing Frequency-Switchable On/In-Metal Semi-Active Tag
On the Maximum End-Fire Directivity of Compact Antenna Arrays Based on Electrical Dipoles and Huygens Sources
A Polarization Reconfigurable 5D Printed Dual Integrated Quadrifilar Helix Array Antenna Embedded Within a Cylindrical Dielectric Mesh
Wideband Gain Enhancement of MIMO Antenna and Its Application in FMCW Radar Sensor Integrated With CMOS-Based Transceiver Chip for Human Respiratory Monitoring
Design of Highly Directive GRIN MS Lens Integrated DFHA for Deep Tissue Biomedical Imaging
A Low-Cost and Low-Profile Electronically Programmable Bit Array Antenna for Two-Dimensional Wide-Angle Beam Steering
Close-Packed Quad-Element Triple-Band-Notched UWB MIMO Antenna With Upgrading Capability
Arrays and Periodic Structures
Nonuniform Amplitude Transmitarray for Multibeam Including Near-Field Focusing
High-Efficiency Modulation and Harmonic Beam Scanning in Time-Modulated Array
Development of an Equivalent Circuit Model for the Design of Array of Electrically Small Antennas
A Frequency Multiplexing Patch Antenna Array for Space Selectable Microwave Heating
Efficient Semi-Analytical Method for the Analysis of Large Finite Connected Slot Arrays
Scan-Loss Compensation for Full-Azimuth Multi-Facet Phased Array Antennas
An Optically Transparent Hybrid Mechanism Metasurface for Wideband, Wide-Angle and Omnidirectional Scattering Suppression
Method of Designing a Planar Scan Angle Enhancing Metalens Featuring Lossless Wide Scanning at mmWave
Compact Shared-Aperture Dual-Band Dual-Circularly-Polarized Waveguide Antenna Array Operating at K/Ka-Band
Robust Low Sidelobe Synthesis for Arbitrary Arrays Based on Gradient Ascent With Min-Oracle
Dual-Band Shared-Aperture Variable Inclination Continuous Transverse Stub Antenna
A Low-Profile Ultra-Wideband and Wide-Scanning Phased Array for UHF Applications
Two-Dimensional Beam Steering Using a Stacked Modulated Geodesic Lunenburg Lens Array Antenna for sG and Beyond
Support Vector Regression-Enabled Optimization Strategy of Dual Circularly-Polarized Shaped-Beam Reflectarray With Improved Cross Polarization Performance
A UWB Low-Profile Hemispherical Array for Wide Angle Scanning
High-Resolution Programmable Scattering for Wireless Coverage Enhancement: An Indoor Field Trial Campaign
Design and Characterization of the Fully Metallic Gap Waveguide-Based Frequency Selective Radome for Millimeter Wave Fixed Beam
Array Antenna
Broadband Millimeter-Wave Circularly Polarized Open-Ended Waveguide Antenna Using Stubs and Its Application in Forming an Array
Spherical Random Arrays With Application to Aerial Collaborative Beamforming
A Planar SIW-Based Mm-Wave Frequency-Scanning Slot Antenna Array With No Scan Blindness at Normal
A 2D-Programmable and Scalable Reconfigurable Intelligent Surface Remotely Controlled via Digital Infrared Code
Reconfigurable Bidirectional Beam-Steering Aperture With Transmitarray, Reflectarray, and Transmit-Reflect-Array Modes Switching
High Aperture Efficiency Arced Conformal Array With Phasor Beam Steering Antenna
Measuring Array Mutual Impedances Using Embedded Element Patterns
Conformal Frequency Selective Surfaces for Arbitrary Curvature
A Low-RCS Multifunctional Shared Aperture With Wideband Reconfigurable Reflectarray Antenna and Tunable Scattering Characteristic
A Liquid Sensor Based on Frequency Selective Surfaces
Self-Progressive Near-Field Focusing 2-D Full Frequency Scanning Slot Array Antenna Based on Ridge-Gap Waveguide

Y. F. Wu, Y. Guo, and Y. J. Cheng
Metagrating-Assisted High-Directivity Sparse Regular Antenna Arrays for Scanning Applications .................................................. Y. Kerzhner and A. Epstein

Fully Automated Design Method Based on Reinforcement Learning and Surrogate Modeling for Antenna Array Decoupling ................................................................. Z. Wei, Z. Zhou, P. Wang, J. Ren, Y. Yin, G. F. Pedersen, and M. Shen

Optimal Pattern Synthesis for Polarimetric Phased Array Antenna Using Representative Array Patterns ................................................................. J. Zhou, C. Pang, Z. Wang, Y. Li, and X. Wang

Remarks on Noise Shaping for Phased Array Analog Beamforming .................................................................................................................. S. Sheikh and A. A. Kishk

Fast Computation of Resonant Metasurfaces in FDTD Scheme Using Dispersive Surface Susceptibility Model ................................................................. X. Jia, X. Wang, and Y. Vahabzadeh

A Quad-Polarization Reconfigurable Fixed-Frequency Beam-Scanning Leaky-Wave Antenna Based on the Holographic Method for Millimeter-Wave Application ........................................ S. Wang, Z. Li, and J. Wang

Electromagnetics

Space-Time Electromagnetic Inverse Scattering Tomography of Objects With Affine Deformation ................................................................. N. Saliiani, A. Pourzadi, and M. Azghani

Explicit Conversion Formulas Between Spherical Wave Expansions With Scalar and Vector Expansion Coefficients ................................................................. J. Knapp and T. F. Eibert

Extended Method of Lines to Model Cylindrical Graphene-Based Multilayer Structures ........................................................................................ A. Mehrdadjian, K. Foroozagh, and K. Hosseini

High-Purity Multi-Mode Vortex Beam Generation With Full Complex-Amplitude-Controlable Metasurface ........................................................................ Q. Li, C. Wu, Z. Zhang, S. Zhao, B. Zhong, S. Li, H. Li, and L. Jin

Accurate and Efficient Method for Analyzing the Transfer Efficiency of Metasurface-Based Wireless Power Transfer System ........................................................................ X. Wu, H. Xue, S. Zhao, J. Han, M. Chang, H. Liu, and L. Li

Field Synthesis With Azimuthally Varying, Cascaded, Cylindrical Metasurfaces Using a Wave Matrix Approach ................................................................. C.-W. Lin and A. Grbic

Numerical Methods

A Complete Helmholtz Decomposition on Multiply Connected Subdivision Surfaces and Its Application to Integral Equations ........................................................................ A. M. A. Alsnaqyjan, L. C. Kempel, and B. Shanker

Neural Born Iterative Method for Solving Inverse Scattering Problems: 2D Cases .......................................................................................... T. Shan, Z. Lin, X. Song, M. Li, F. Yang, and S. Xu

Characteristic Mode Decomposition Using the Scattering Dyadic in Arbitrary Full-Wave Solvers .......................................................................................... M. Capek, J. Lundgren, M. Gustafsson, K. Schab, and L. Jelinek

Synthesis of Clustered Concentric Ring Arrays Through Joint Optimization of Multi-Parameters ........................................................................ J. Yang, F. Yang, P. Yang, and Z. Xing

Self-Dual Integral Equation Based DDM for Scattering From Compound BoR-and-Non-BoR IBC Object .................................................................................. M. Nasirian, M. Maddah-Ali, M. Maddahiali, and A. Bakhtafrouz

Second-Order Nédélec Curl-Conforming Hexahedral Element for Computational Electromagnetics ........................................................................ A. Amor-Martin and L. E. Garcia-Castillo

A Locally-Implicit Discontinuous Galerkin Time-Domain Method to Simulate Metasurfaces Using Generalized Sheet Transition Conditions ........................................................................ L. Chen, M. B. Özakın, R. Zhao, and H. Bagci

Wave Propagation and Scattering

Uncertainty EM Scattering Prediction for Inhomogeneous Dielectric Bodies of Revolution ................................................................................. Z. He, S.-X. Li, and D.-Z. Ding

Estimation and Separation of Ionospheric Narrow-Band Unknown O and X Waves .......................................................................................... W. Tang, W. Qu, L. You, T. Li, J. Xin, and S. Yang

Dyadic Green’s Function of Perfect Electromagnetic Conductor Rectangular Waveguides and Cavities ........................................................................ S. A. Sahafi and M. Ghaffari-Miab

Spatial Non-Stationary Near-Field Channel Modeling and Validation for Massive MIMO Systems .............................................................................................. Z. Yuan, J. Zhang, Y. Ji, G. F. Pedersen, and W. Fan

On the Application of Orthogonality Sampling Method for Object Detection in Microwave Imaging ................................................................................. W.-K. Park

Other Topics

Unrolled Convolutional Neural Network for Full-Wave Inverse Scattering .......................................................................................... Y. Zhang, M. Lambert, A. Fraysse, and D. Lesselier

ISAR Imagery for a Composite Target-Layered Rough Surface Scene Based on the Accelerated Time-Domain Scattering Algorithm ........................................................................ R. Wang, L. Liao, G. Guo, and L. Guo

Fast Antenna Characterization With Numerical Expansion Functions Built With Partial Knowledge of the Antenna and Accelerated Asymptotic Methods .................................................................................. M. Righero, G. Giordanengo, L. Ciorba, and G. Vecchi

Communications

Wideband Low-Profile Connected Rectangular Ring Dielectric Resonator Antenna Array for Millimeter-Wave Applications ................................................................. Y.-T. Liu, B. Ma, S. Huang, S. Wang, Z. J. Hou, and W. Wu

Pattern Reconfigurable Yagi Antenna Based on Active Corrugated Stripline .......................................................................................... J. Lu, H. C. Zhang, P. H. He, M. Wang, and T. J. Cui
CALL FOR PAPERS – Measurement Technologies for Emerging 5G and Beyond Channel Characterization and Antenna Systems

ANNOUNCEMENTS

A Deep Learning Approach for Reconstruction in Millimeter-Wave Imaging Systems

EM Scattering by Gyrotropic Circular Cylinders With Arbitrarily Oriented External Magnetic Bias

A Rigorous Solution to Electromagnetic Wave Diffraction by Junctions of Impedance and Semitransparent Surfaces

An Extension of Partial Element Equivalent Circuit Method for Frequency Selective Surface Analysis

A Liquid Crystal Tunable Metamaterial Unit Cell for Dynamic Metasurface Antennas

An Extension of Partial Element Equivalent Circuit Method for Frequency Selective Surface Analysis

A Deep Learning Approach for Reconstruction in Millimeter-Wave Imaging Systems

Nondestructive Testing Using mm-Wave Sparse Imaging Verified for Singly Curved Composite Panels

ANNOUNCEMENTS
